Hazard Assessment Form

Date of Assessment:	January 27, 2026	Job/position:	Office Administration	Date Reviewed:	Feb 4, 2026
Assessment performed by:	Sandra Tutka	Supervisor:	Peter Godler	Date Implemented:	Feb 25, 2026

		Inherent Risk Before Controls			Hierarchy of Control in Place	Residual Risk After Controls		
Task	Hazards Present	Likelihood	Severity	Risk Level		Likelihood	Severity	Risk Level
prolonged computer work (emails, reports, scheduling)	Poor workstation ergonomics, awkward posture, repetitive mouse/keyboard use	Likely (2)	Serious (3)	6	Engineering: ergonomic chair, mouse and desk. Administrative: breaks, task rotation, stretching	Remote (1)	Minimal (1)	1
Sitting for long periods	Sedentary posture, poor chair support	Likely (2)	Serious (3)	6	Engineering: Sit-stand workstation. Administrative: movement breaks, walking meetings.	Likely (2)	Moderate (2)	4
Filing documents / accessing storage	Reaching, bending, twisting, overfilled cabinets	Remote (1)	Minimal (1)	1	Engineering: Store heavy items between knee and shoulder height, stable shelving.	Remote (1)	Moderate (2)	2
Lifting office supplies (paper boxes, equipment, water jugs)	Manual material handling. Back strain, muscle sprain	Remote (1)	Moderate (2)	2	Elimination: Order smaller supply quantities. Administrative: Safe lifting training/team lifts.	Remote (1)	Minimal (1)	1
Exposure to opioids or other controlled substances	accidental contact, inhalation, or ingestion which may result in overdose, respiratory depression, or other serious health effects	Possible (2)	Catastrophic (4)	8	Elimination: Avoid entering high-risk environments. Engineering: Use barriers, proper ventilation. Administrative: Training on hazard recognition, safe handling procedures, incident response, naloxone training PPE: gloves, masks	Remote (1)	Moderate (2)	4
Walking through office / common areas	Slips, trips, and falls (wet floors, cords, clutter, uneven flooring)	Remote (1)	Moderate (2)	2	Administrative: Good housekeeping rules, prompt spill cleanup.	Remote (1)	Minimal (1)	1

Hazard Assessment Form

High workload / deadline pressure	Burnout, headaches, decreased focus (increases other risks)	Probable (3)	Minimal (1)	3	Administrative: Workload planning realistic deadlines, encourage time off, mental health resources.	Likely (2)	Minimal (1)	2
Use of cleaning supplies (light tidying, spills)	Chemical exposure, wet floors. Skin/eye irritation, slips.	Probable (3)	Minimal (1)	3	Substitution: Use low-toxicity cleaners. Engineering: Clearly labeled products, proper storage. Administrative: WHMIS training, spill cleanup procedures. PPE: Gloves if handling cleaners.	Likely (2)	Minimal (1)	2
Emergency situations (fire alarm, evacuation)	Panic, blocked exits, poor lighting	Remote (1)	Serious (3)	3	Administrative: Fire drills, posted evacuation plans, trained fire wardens.	Remote (1)	Minimal (1)	1
Indoor air quality issues	Poor ventilation, dust, fragrances. Headaches, respiratory irritation, allergies	Expected (4)	Moderate (2)	8	Engineering: Proper HVAC maintenance, air filtration.	Probable (3)	Minimal (1)	3
Managing office equipment (printer jams, moving small devices)	Pinch points, hot components, electrical cords	Probable (3)	Moderate (2)	6	Administrative: Training on clearing jams safely, unplug before servicing.	Likely (2)	Minimal (1)	3
Using step stool or small ladder to access storage	Fall from height (low level), unstable stool	Remote (1)	Moderate (2)	2	Administrative: Training on clearing jams safely, unplug before servicing.	Remote (1)	Minimal (1)	1
Interacting with staff or public (front desk, phone, conflict situations)	Workplace stress, verbal aggression, difficult interactions	Probable (3)	Minimal (1)	3	Administrative: Workplace violence & harassment policy, conflict resolution training, clear reporting process.	Remote (1)	Minimal (1)	1
Using a forklift	Damage product, hitting other people, falling product,	Likely (2)	Serious (3)	6	Elimination: Order smaller supply quantities. Engineering: Lights, horn Administrative: Training	Remote (1)	Minimal (1)	1

Hazard Assessment Form

Level of Risk Chart

Likelihood: The likelihood parameter looks at the chance of a negative situation occurring.

Severity: Severity measures the degree of harm that exposure to the hazard could result in.

The level of risk is determined by the equation: **Likelihood x Severity = Risk** as per the table below.

Risk Chart		Likelihood of Occurrence			
		Expected (4) Very likely to happen	Probable (3) Could happen	Possible (2) A chance it could happen	Remote (1) Very unlikely to happen
Severity	Catastrophic (4) Death, critical injury, property damage over \$10K	16	12	8	4
	Serious (3) Medical Aid, lost time, property damage over \$5K	12	9	6	3
	Moderate (2) First over Aid, Minor illness, Property damage \$1K	8	6	4	2
	Minimal (1) No injury, minor damage	4	3	2	1

The risk score is then used to determine a risk category which will dictate actions required to manage the risk.

Risk Score Level	Risk Category	Action Required
16	Severe	Stop work immediately, implement controls to reduce the risk
9-12	High	Consider additional controls to reduce the risk. Create a Safe Work (Job) Procedure
4 -8	Medium	Consider additional controls, Create a Safe Work Practice
1 - 3	Low	Minimal risk, monitor the operation
