# Hazard Assessment Form

## Level of Risk Chart

**Likelihood:** The likelihood parameter looks at the chance of a negative situation occurring.

**Severity:** Severity measures the degree of harm that exposure to the hazard could result in.

The level of risk is determined by the equation: **Likelihood x Severity = Risk** as per the table below.

| Risk Chart |                                                                               | Likelihood of Occurrence                 |                                 |                                             |                                          |
|------------|-------------------------------------------------------------------------------|------------------------------------------|---------------------------------|---------------------------------------------|------------------------------------------|
|            |                                                                               | Expected<br>(4)<br>Very likely to happen | Probable<br>(3)<br>Could happen | Possible<br>(2)<br>A chance it could happen | Remote<br>(1)<br>Very unlikely to happen |
| Severity   | <b>Catastrophic (4)</b><br>Death, critical injury, property damage over \$10K | 16                                       | 12                              | 8                                           | 4                                        |
|            | <b>Serious (3)</b><br>Medical Aid, lost time, property damage over \$5K       | 12                                       | 9                               | 6                                           | 3                                        |
|            | <b>Moderate (2)</b><br>First Aid, Minor illness, Property damage over \$1K    | 8                                        | 6                               | 4                                           | 2                                        |
|            | <b>Minimal (1)</b><br>No injury, minor damage                                 | 4                                        | 3                               | 2                                           | 1                                        |

The risk score is then used to determine a risk category which will dictate actions required to manage the risk.

| Risk Score Level | Risk Category | Action Required                                                                     |
|------------------|---------------|-------------------------------------------------------------------------------------|
| 16               | Severe        | Stop work immediately, implement controls to reduce the risk                        |
| 9-12             | High          | Consider additional controls to reduce the risk. Create a Safe Work (Job) Procedure |
| 4 -8             | Medium        | Consider additional controls, Create a Safe Work Practice                           |
| 1 - 3            | Low           | Minimal risk, monitor the operation                                                 |
